effective inquiry for innovative engineering design presents empirical evidence for this claim it
demonstrates a unique attribute of design thinking by identifying and characterizing a class of
questions called generative design questions these questions are frequently asked by designers in
dialog their use constitutes a fundamental cognitive mechanism in design thinking their discovery
stems from another finding of the work a conceptual duality between questions and decisions that is
engraved deep within the design process this duality challenges a view that treats designing as
decision making decisions form the tip of the iceberg questions keep it afloat can an effective
decision making process be performed without having high quality information can high quality
information be acquired and generated without performing an effective inquiry process the answer to
both questions is no and underscores the importance of our quest to better understand the role of
inquiry in design
