evidence to show that some countries youth perform better on tests such as the program for international student assessment PISA and we know that teachers significantly contribute to the performance of students. It is time that we look at the specific attributes of teacher preparation worldwide although this volume will not look at every country that is in the comparator group for PISA and other measures, we have contacted over 18 potential authors in the same number of countries in which there is ample evidence to show successes regarding student performance and quality teacher preparation programs. The intent of the book is not just to report on the success of each nation, rather, the intent is to ask authors to take a critical look at the process by which science teachers are educated and share with the reader both the positive and negative aspects of such preparation programs. For all 15 contributed chapters, the editors have analyzed each and from this constructed from the data an analysis and report in a final chapter on the exemplary qualities from various nations and make specific recommendations regarding science teacher preparation for the global community. Grade 5 Science 2015-01-14 analysis of past developments in teacher education in pakistan has shown that substantial progress has been made in this field it has however been pointed out that education of science teachers still needs much improvement at the present there is an emergent need to meet the shortage of qualified science teachers and at the same time to bring qualitative improvements in the courses offered in teacher education institutions first we recommend that the 1 year
duration of teacher preparation is grossly inadequate for all teaching courses and should be lengthened and the qualifications for entrance be increased we believe that teaching must be made a graduate profession for example the basic qualification of primary school teachers for admission to teacher education institution should be increased we recommend that ptc should be made a 12 2 year program similarly ct 12 3 b ed 14 2 b s ed 12 4 m a ed 14 3 and m ed one year after b ed or b s ed secondly we think the quality of instruction in teacher preparation programs should be improved most teachers in the teacher preparation institutions use the lecture method most of the time prospective teachers behave like passive listeners to their teachers they do not participate in the teaching learning process some instructors even dictate their notes to the preservice teachers when the teachers join schools they behave the same way
